PROFESSIONAL SUMMARY

Full Stack Developer delivering production systems across two stacks — Python/Django REST with React/TypeScript, and PHP/CodeIgniter with jQuery. Shipped an N-level dynamic approval engine, a KYC compliance suite, and an NLP-driven reminder system with WebSocket sync and push notifications, alongside billing, inventory, and reporting workflows for a jewellery retail platform. Experienced in REST API design, JWT authentication and role-based access control, Flutter clients, Celery-scheduled jobs, and diagnosing production race conditions and timezone defects.

TECHNICAL SKILLS

Languages: Python, PHP, TypeScript, JavaScript, Java, SQL, HTML5, CSS3

Backend: Django, Django REST Framework, CodeIgniter, Spring, Hibernate

Frontend: React, TypeScript, jQuery, Bootstrap, Vite

Databases: MySQL, SQL

Tools & Platforms: Git, GitHub, Firebase Cloud Messaging, Celery, Gunicorn

Practices: Full Stack Development, REST API Design, JWT Auth & RBAC, Root-Cause Debugging, Code Review, Kanban

PROFESSIONAL EXPERIENCE

Logimax Technologies Pvt. Ltd. — Junior Full Stack Developer

Aug 2025 – Present

Project & Workforce Management Platforms — Python/Django REST • React/TypeScript • Flutter • Celery • WebSockets • MySQL

- Develop and maintain two production platforms — an internal project and workforce management system and a client-facing support and compliance platform — building Django REST backends, React/TypeScript frontends, and a Flutter client app.
- Designed and shipped an end-to-end attendance and approvals module covering leave requests, balances, and calendars, featuring an N-level dynamic approval chain with delegation, manager-scoped reporting, and a check-in/check-out flow with task-timer synchronization and stale-session recovery, backed by an automated test suite.
- Engineered a Kanban workflow engine with weightage-gated status transitions, one-step-forward restrictions, and WIP-limit enforcement across settings UI and backend guards, plus a Current Tasks Report with real-time refresh, timezone-safe drill-downs, and Gantt-chart break visualization.
- Built a KYC and asset compliance suite from scratch — document upload with validation, dynamic categories, admin/client CRUD, and Celery-scheduled expiry alerts — alongside an NLP-based reminder engine parsing future dates from free-text comments with cross-device WebSocket sync, Firebase push notifications, and collaboration features including AI-summarized posts, poll voting, and threaded replies with unread tracking.
- Diagnosed and resolved production defects including race conditions in stage assignment and timer tracking, an N+1 query timeout on the tickets list, UUID/foreign-key crashes, and timezone bugs, and consolidated duplicate date-formatting and reply-resolution logic into shared backend and frontend utilities.

Jewellery Retail Management Application — PHP • CodeIgniter • MySQL • jQuery • DataTables

- Developed and maintained a jewellery retail management application using PHP, CodeIgniter, MySQL, jQuery, and DataTables.
- Delivered core retail workflows spanning billing, inventory, purchasing, order management, product tagging, stock transfers, and reporting.
- Implemented business logic for jewellery-specific data including item weight, purity, pricing, making charges, taxes, and transaction calculations.
- Built dynamic reporting and document generation with filtering, search, export, PDF, and print support for day-to-day business operations.
- Collaborated with a multi-developer team across feature development, testing, code reviews, integration, debugging, and ongoing application maintenance.

Firstsource Solutions Limited — AR Analyst

Jan 2025 – Jul 2025

- Analyzed and processed healthcare claims, following up with insurance providers to resolve outstanding accounts while maintaining high accuracy in reconciliation and payment posting.

- Partnered with cross-functional teams to identify claim denials, appeal rejections, and improve collection efficiency.
- Ensured HIPAA compliance and internal data protection standards while consistently meeting or exceeding daily productivity and quality targets in a fast-paced, metrics-driven environment.

Makinfratek Software Solution — Frontend Developer Intern

Aug 2023 – Oct 2023

- Built responsive user interfaces using HTML, CSS, JavaScript, Bootstrap, and jQuery, translating design specifications into working components with consistent behaviour across browsers and screen sizes.
- Contributed ideas in team meetings and participated across the frontend development lifecycle, from implementation through testing.

PROJECTS

Employee Project & Task Management System

React 19, Django REST Framework, MySQL

- Built a full-stack, role-based workforce management platform (React 19, Django REST Framework, MySQL) with JWT authentication — access/refresh rotation and blacklist-on-logout — and three-tier Admin/Manager/Employee access control enforced at the API layer, not only in the UI.
- Implemented core HR and project workflows over full CRUD REST APIs: employee onboarding, project and task assignment with auto-computed progress, leave request and approval, and personal reminders, with soft-delete employee lifecycle management that preserves historical task, project, and leave records for reporting integrity.
- Added a task attachment system supporting file, audio, video, and URL attachments with MIME-type detection and server-side validation, plus an in-app polling notification system that alerts employees on task assignment.
- Built a live analytics dashboard computed from database aggregations — stat cards, task-status breakdown, workload charts, and pending approvals — with a colorblind-safe chart palette, dark/light theming with OS-preference detection, and a reusable toast notification system.

Smart Healthcare Management System

Python, Machine Learning, IoT

- Built a healthcare management platform integrating IoT sensor data to enable real-time patient monitoring.
- Implemented machine learning models in Python for predictive treatment analytics and electronic health record (EHR) integration.
- Added telemedicine functionality and data security protocols to widen access to care while supporting compliance requirements.

Air Pollution Detection Using Spatio-Temporal Data

Python, Machine Learning, GIS

- Developed a system analyzing air pollution patterns from real-time sensor feeds and geographic information system (GIS) data.
- Applied machine learning algorithms to forecast pollution trends and assess environmental risk levels.
- Created dynamic visualizations of pollution hotspots across time and geography to support urban planning decisions.

EDUCATION

Adithya Institute of Technology — B.Tech, Information Technology

2020 – 2024

Percentage: 76%

AKT Metric Higher Secondary School — HSC

2019 – 2020

Percentage: 72%

AKT Metric Higher Secondary School — SSLC

2018 – 2019

Percentage: 60%

CERTIFICATIONS

- Full Stack Web Development — Tap Academy (Jan 2025, Cert. No. 07303)
- Full Stack Development — GUVI
- Frontend Web Development Internship — Makinfratek Software Solution
